--------------------------	---------------------------------------	----------------------	------------------

Here's everything your VSCode AI needs! Here's a quick breakdown:

 How to Use These in the URL

Append them as query parameters to your booking widget iframe URL. For example:

None

```
?contact.contact_vehicle_year=2022&contact.contact_vehicle_make=Ford&contact.contact_primary_service_requested=Window+Tinting
```

 Important Notes for Your Dev

Situation	What to do
Multi-select fields	Separate values with commas or pass multiple params with the same key
Single-select / Radio fields	Pass the value exactly as it appears in the picklist options

Standard fields (name, email,
phone)

Use the short key — no `contact.` prefix

Spaces in values

URL-encode them (+ or %20)
